SUMMARY

AI/ML undergraduate at VIT Bhopal (GPA 8.96, Batch 2027) who builds things end-to-end and ships them. Hands-on experience designing LLM-powered agents, RAG pipelines, and FastAPI backends integrated with real data sources and third-party APIs. Currently contributing to open-source production software at IIT Bombay. Strong preference for working with systems that solve real business problems — not writing research papers.

EDUCATION

VIT Bhopal University — B.Tech in Computer Science (AI & ML) Bhopal, India | 2023 – 2027
GPA: 8.96 / 10.0

Pt. D.M. Mishra Memorial Public School — Class XII Kanpur, India
Percentage: 86.6% / 100%

EXPERIENCE

Software Engineering Intern — FOSSEE, IIT Bombay (Osdag LCCA Team) Remote | Feb 2026 – Mar 2026
Python · PyQt · SQLite · REST APIs · Agile · Git

- Owned end-to-end design and delivery of the Life Cycle Cost Assessment (LCCA) module in Python and SQLite — took it from idea to production for 500+ active engineering users across 5+ cost evaluation categories.
- Built and integrated backend data pipelines handling ingestion, transformation, and structured storage for structural cost datasets used in real client workflows.
- Drove debugging and GUI enhancements that cut user-reported stability issues by 25%; participated in code reviews and authored documentation for 3+ modules in a 7,000+ line Python codebase.

PROJECTS

Code Reviewer AI | [Live →](#) Dec 2025
Python · FastAPI · Google Gemini API · LangChain · FAISS (RAG) · React · Vercel

- Built a production LLM agent that autonomously reviews code — ingests up to 1,000+ lines per session, routes to a RAG pipeline (FAISS vector store + Gemini API), and delivers architecture and security insights in under 3 seconds.
- Engineered the full prompt engineering layer: designed, evaluated, and iteratively refined prompts to reduce review errors by 30% and improve output reliability across diverse codebases.
- Exposed the agent via a FastAPI backend with REST endpoints; deployed on Vercel with CI/CD pipelines and an API rate-handling layer supporting 50 concurrent users without degradation.

Wave Academy | [Live →](#) May 2026
React · TypeScript · FastAPI · Supabase (PostgreSQL) · Firebase · Vercel

- Sole developer of a full-stack platform with 1,500+ active students; architected a dual-backend system (Supabase PostgreSQL + Firebase real-time) with REST API layer, reducing data fetch latency by 40%.
- Built a data ingestion and transformation engine using the xlsx library — teachers upload 100+ test results via Excel; pipeline cleans, validates, and stores records in seconds, cutting manual entry time by 80%.
- Implemented row-level security, auth flows, and scheduled data jobs — end-to-end ownership from schema design to production deployment.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, HTML, CSS

LLM & AI: Google Gemini API, OpenAI API, LangChain, LangGraph, FAISS, RAG Pipelines, Prompt Engineering

Frameworks & Tools: FastAPI, Flask, React, Node.js, PyTorch, scikit-learn

Databases: PostgreSQL, SQLite, MongoDB, Firebase, Supabase, Vector Databases

Cloud & DevOps: AWS (S3, VPC, CloudWatch), Docker (basics), Vercel, CI/CD, Git

ACHIEVEMENTS

- Top 10 Finalist — HackMol 6.0 (NIT Jalandhar) — shipped a working product among 500+ competing teams.
- Ranked in top cohort of a competitive placement coding screening involving 423+ students at VIT Bhopal.
- Completed 100-Day LeetCode Challenge — consistent daily DSA problem solving; arrays, graphs, and DP.
- MERN Full Stack Development Certification — Ethnus.

LEADERSHIP

Co-Lead, Insights Club — VIT Bhopal 2025 – Present

- Organized 10+ technical sessions for 200+ students on LLMs, RAG pipelines, agentic AI, and production ML systems.

Placement Coordinator, PAT Team — VIT Bhopal 2024 – Present

- Managed placement operations and mock interview cycles for 450+ students across 2 recruiting companies.
